

IMAGE SCRAPER

Step 1: Creating Environment

Step 2: Install all libraries in requirements.txt file

Step3: Set environment in PyCharm

Step 4: Run application

Using this Application, we can fetch images from google

How to execute the code

Step 1: pip install selenium, pillow, requests

Step 2: make sure you have chrome/Mozilla installed on your machine

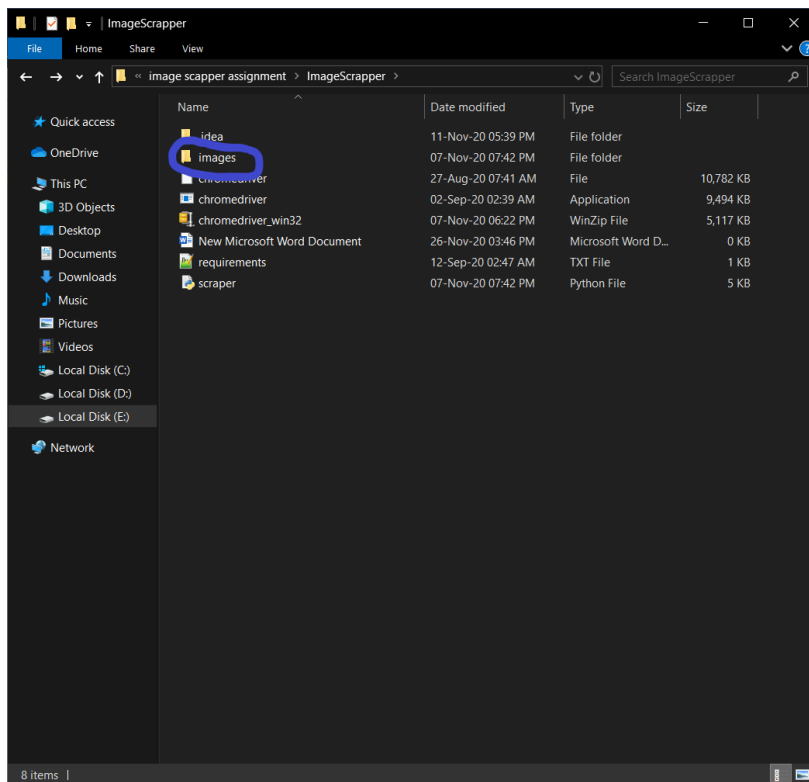

Step 3: Check your chrome version (go to 'three dots' then 'help' then 'about google chrome')

Step 4 : Download the same chrome driver from here

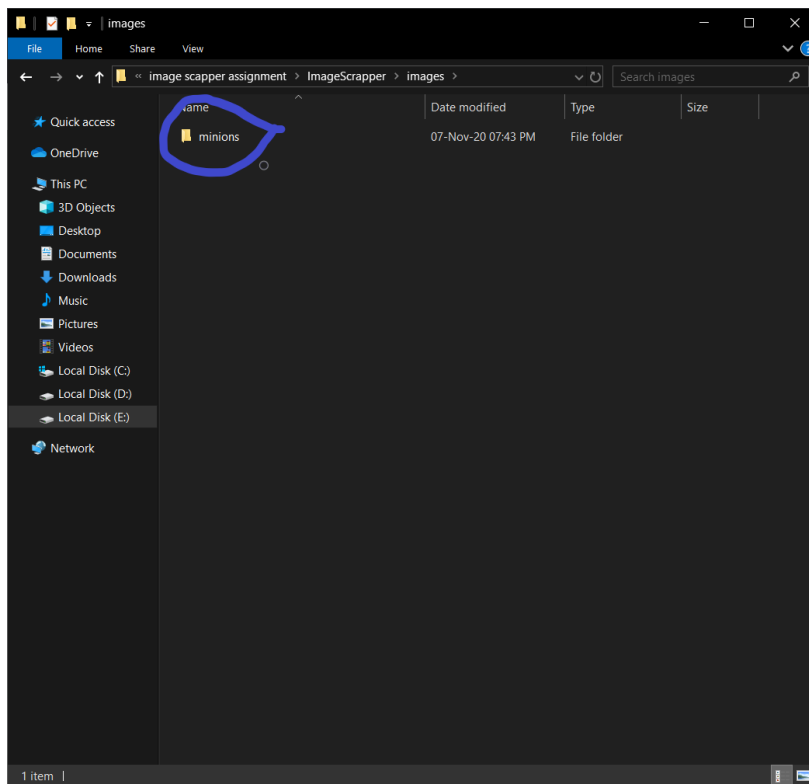

<https://chromedriver.storage.googleapis.com/index.html> select the folder which is closer to your chrome version for windows download 'chromedriver-win32**' click on it once it downloaded then put it inside the same folder where your application is.**

I fetched Minions 5 images from google

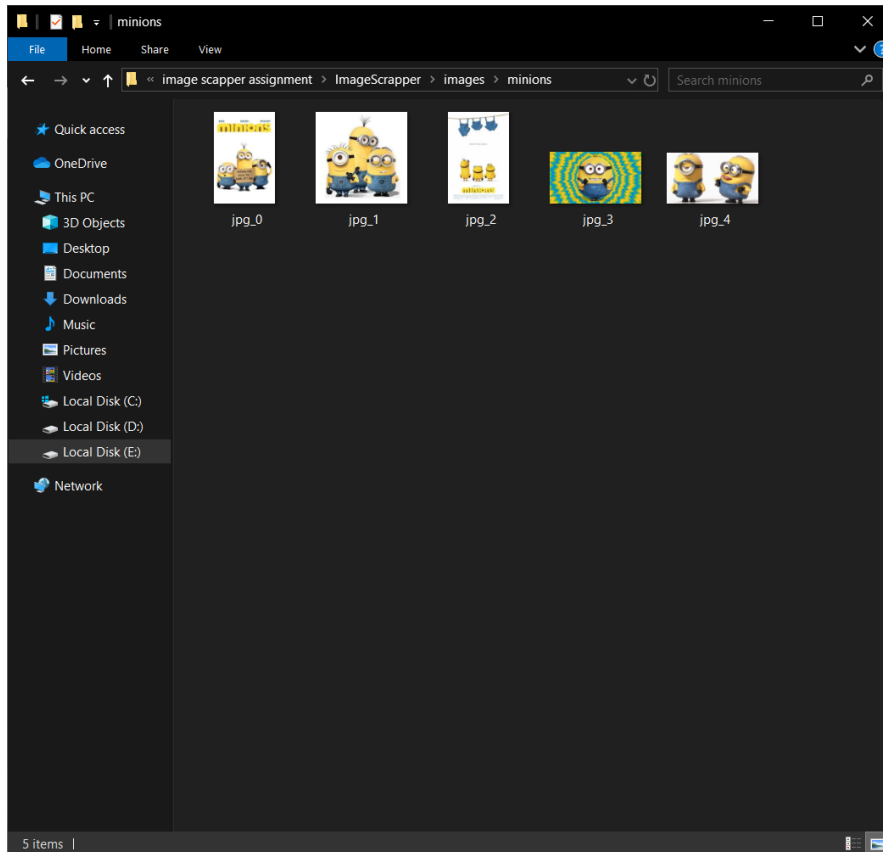

Result: -

Inside the Images folder 'minions folder' created

Five images fetch successfully!

Application Run successfully!
